

PASADENA, CA – SEPTEMBER 2016. Obsolescence announcement.

Kinematics is announcing End-of-Life of the **Condor Seismic Monitoring System**. The Condor Seismic Monitoring System was introduced more than 10 years ago as a reliable, cost-effective solution for seismic monitoring demands of nuclear power plants. Kinematics decided to discontinue the Condor Seismic Monitoring System effective September 9, 2016.

The Condor Seismic Monitoring System will continue to be supported through September 9, 2019.

Kinematics recommends the second generation Condor, **Condor2 Seismic Monitoring System** instead, which is the world's most advanced and cost-effective system solution for monitoring seismic activity at nuclear power plants and other energy facilities. Condor2 System features comprehensive event analysis and alarm-notification capabilities and is fully qualified to meet or exceed all applicable standards while leveraging on the successful user interface introduced with the first-generation Condor that keeps the set up and maintenance of the system as quick and easy as possible.
